SERVICE DESCRIPTION

Telco's like Chorus have been shutting down the old telephone line copper network all over New Zealand and this situation has raised issues around Emergency Lift phone lines, and their ability to operate on the fibre Network as most older telephone equipment installed lifts is simply not compatible.

ALARMNZ has a solution to ensure lifts have a working emergency Lift phone line and can be installed stand alone, or be an additional service included as part of the existing emergency Broadband Equipment often already on site. The **ALARMNZ** Lift phone line solution includes a Lift Alarm option that can be used both as backup panic switch, or Elevator control module alert able to detect Power failures and grounding alarms.
